

The Small Steps Presentation: What Parent/Caregivers Liked and Learned

Before the social/meeting presentation, one parent was not likely to have an eye exam because “I would assume it was just strained eyes and nothing serious, plus I don’t like doctors.”

After the presentation, this parent said she would attend an eye exam for herself because “There are long-term effects that would worsen, and for overall health benefits. I would want to be able (to) have good vision so I don’t endanger anyone.”

“Knowledge of how seeing affects their learning” changed one parent’s mind about taking her child to the eye doctor.

The literature provided (in presentation) shows solid evidence of why it (attending an eye exam after a vision screening referral) is important.

Parents usually don’t know their child has a vision problem.

(I liked) the explanation of how vision affects the child’s ability to learn and socialize with others.

Children don’t know they have vision problems.

(Learned) how frustrating it can be to children to have eye problems.

I learned that vision problems may lead to permanent vision loss if not treated.

Vision problems can affect a child’s behavior.

(Importance of) taking care of your own vision.

My child may not be able to see even if I think they can.

Didn’t know how serious it (vision disorders) can be.

Now please come back and do this presentation for others.

**Prevent
Blindness**
Our Vision Is Vision.

“Small Steps for Big Vision” is an initiative of the National Center for Children’s Vision and Eye Health at Prevent Blindness (www.nationalcenter.preventblindness.org). For more information, contact: info@preventblindness.org
